Professional Summary

DevOps Lead / Cloud Platform Architect with 9+ years of experience designing and operating enterprise cloud platforms on AWS using Kubernetes, Terraform, Docker, Helm, Jenkins, GitHub Actions, Azure DevOps, and GitLab CI/CD. Strong expertise in Infrastructure as Code, API integration, platform automation, observability, and DevSecOps. Extensive experience building scalable CI/CD platforms, REST API automation, Kong API Gateway, OpenAPI/Swagger integration, cloud-native architectures, and production support. Experienced collaborating with cross-functional teams and cloud vendors to deliver secure, highly available SaaS platforms. Currently expanding expertise into Oracle Cloud Infrastructure (OCI), Oracle EPM SaaS, Oracle Integration Cloud (OIC), and enterprise SaaS platform engineering.

Core Architecture & Platform Engineering Skills

- Architect and implement secure, scalable, and highly available cloud infrastructure on Amazon Web Services using **Infrastructure as Code (Terraform and Terragrunt)**, enabling automated, repeatable, and consistent multi-environment provisioning.
- Design and manage enterprise Kubernetes platforms using **Amazon EKS**, supporting microservices architecture with high availability, auto-scaling, fault tolerance, and zero-downtime deployments.
- Architect and govern **End-to-End CI/CD** platforms using **Azure DevOps**, Jenkins, and GitHub Actions, enabling fully automated build, validation, infrastructure provisioning, and application deployment workflows.
- Design **reusable**, modular **Terraform architecture and standardized infrastructure frameworks**, reducing manual provisioning effort, improving deployment consistency, and enabling scalable platform engineering practices.
- Architect **multi-account AWS Landing Zone environments** using AWS Organizations, implementing secure account isolation, governance controls, **Service Control Policies (SCPs)**, and centralized identity and access management.
- Design secure and scalable cloud network architecture using **VPC segmentation**, private/public subnets, IAM policies, and controlled service-to-service communication, ensuring strong security posture and network isolation.
- Architect and manage event-driven and streaming platforms using **Apache Kafka (Amazon MSK)**, enabling real-time, scalable, fault-tolerant communication between distributed microservices.
- Design and implement centralized **observability and monitoring platforms** using Prometheus, Grafana, Dynatrace, and CloudWatch, enabling proactive monitoring, intelligent alerting, performance optimization, and faster incident detection and resolution.

- Architect and manage secure API management platforms using **Kong Inc.** API Gateway and AWS API Gateway, implementing authentication and authorization (**OAuth 2.0, JWT, OIDC**), **rate limiting, and secure external API exposure**.
- Develop and implement automation using **Bash** and **Python** scripting for infrastructure provisioning, **CI/CD pipelines**, operational automation, and system administration, improving operational efficiency and reliability.
- Lead production operations, **incident management**, and **root cause analysis (RCA)**, improving platform reliability, availability, performance, and operational stability.
- Understanding of **Oracle Cloud Infrastructure (OCI)** concepts and enterprise SaaS platform architecture.
- Familiar with Oracle EPM Cloud deployment architecture, Oracle Integration Cloud (OIC), **Enterprise Data Management Cloud Service (EDMCS)**, and **Oracle Identity Cloud Service (IDCS)**.
- Knowledge of **REST** API-based automation, metadata migration, enterprise integrations, and cloud identity management for Oracle SaaS platforms.
- **Mentor and lead DevOps and platform engineering teams**, driving adoption of Infrastructure as Code, Azure Repo, CI/CD automation, and modern cloud-native architecture practices.

Professional Experience

Nov 2024 – PRESENT

DevOps Lead/Architect | Hero Moto Corp | Bangalore, India

- Led the design and implementation of Infrastructure as Code (IaC) using Terraform and Terragrunt across multiple environments.
- Architected and maintained reusable Terraform modules to standardize AWS infrastructure provisioning.
- Designed, implemented, and governed Azure DevOps CI/CD pipelines (YAML) for backend services and supporting platforms.
- Defined and enforced branching strategies, PR validations, and access controls using Azure Repos.
- Led Docker containerization and deployment of applications on Kubernetes, ensuring high availability and scalability.
- Designed and maintained Helm charts for Kubernetes workloads and environment-specific configurations.
- Implemented ADO based deployments using Argo CD for automated and controlled application releases.
- Architected and supported AWS MSK (Kafka) for event-driven messaging and real-time data processing.
- Integrated Kafka producers and consumers with cloud-native services for reliable data streaming.
- Oversaw AWS infrastructure architecture, ensuring security, performance optimization, and cost efficiency.
- Established centralized monitoring, logging, and alerting using CloudWatch, Grafana, Dynatrace and Prometheus.
- Architected secure API management platform using Kong API Gateway and AWS API Gateway implementing OAuth2 and JWT authentication.
- Supported mobile app CI/CD pipelines by integrating backend APIs with mobile release workflows.

- Collaborated with cross-functional teams including backend, mobile (iOS/Android), QA, and security teams.
- Led production deployments, incident management, and root cause analysis.
- Mentored engineers and established DevOps best practices and standards.

Mar 2023 – Nov 2024

DevOps Module Lead | Happiest Minds Technologies Limited | Bangalore, India

- Develop, maintain, and optimize CI/CD pipelines using Azure DevOps, ensuring seamless and automated code integration, testing, and deployment.
- Implement and manage automated testing frameworks, improving code quality, reliability, and release confidence.
- Containerize applications using Docker, ensuring environment consistency across development, staging, and production.
- Deploy and manage containerized applications using Kubernetes, ensuring high availability, scalability, resilience, and zero-downtime deployments.
- Manage code signing, provisioning profiles, and App Store release processes, ensuring secure and compliant iOS deployments.
- Utilize Azure Repos for source code management and version control, implementing effective branching, merging, and code review strategies.
- Collaborate with development teams to ensure proper integration, validation, and quality of code changes.
- Designed and implemented reusable CI/CD pipeline templates using Azure DevOps, Jenkins, and GitHub Actions, enabling standardized build and deployment processes across multiple applications.
- Automated deployment and operational workflows using Python, Bash scripting, REST APIs, and Infrastructure as Code, reducing manual effort and improving release efficiency.
- Integrated enterprise applications using RESTful APIs, OpenAPI/Swagger specifications, and secure file transfer (SFTP) mechanisms to support automated application and data integration.
- Implemented DevSecOps best practices by integrating secrets management, IAM policies, vulnerability scanning, and security validation within CI/CD pipelines.
- Collaborated with QA teams to integrate automated testing into CI/CD pipelines, improving release quality and deployment confidence.
- Worked with cross-functional teams including development, QA, security, and cloud platform engineers to deliver reliable, scalable, and secure cloud-native solutions.
- Implemented centralized monitoring and alerting using Prometheus, Grafana, Splunk, and Zabbix, enabling proactive monitoring, faster incident detection, and improved operational visibility.
- Supported production deployments, incident troubleshooting, root cause analysis (RCA), and continuous service improvements to ensure platform availability and reliability.

Sep 2019 – Mar 2023

DevOps Engineer | Scientific Games (LNW India Solutions Private Limited) | Bangalore, India

SEP 2018 – Jan 2019

Windows Server Administrator | KFIN Technologies Private Limited | Bangalore, India

Jul 2013 – Aug 2015

Network Engineer | Rangsons Electronics Private Limited (through Shanthu Employment Pvt. Ltd.) | Mysuru, India

DEVOPS & CLOUD STACK

Cloud Platforms	AWS (EKS, EC2, Lambda, MSK, Elasticache, RDS, S3, IAM, CloudWatch, Secrets Manager, Flink, VPC, Step function, IOT core, Fleet wise, Cognito, DynamoDB, Eventbridge, Glue, MemoryDB, OpenSearch, Route53), Oracle Cloud Infrastructure (OCI) – Familiarity
Source Management Tools	GIT, GITHUB, Azure Repo
CI/CD Tools	Jenkins, ADO, GitHub Action, GitLab CI\CD
Infrastructure as Code	Ansible, Terraform, Terragrunt
Bug Tracking & ITSM Tools	Jira, Service Now
Scripting	Bash, Python, PowerShell (working knowledge), Shell scripting
Containers & Orchestration	Docker, Kubernetes, Helm, Argo CD
Collaboration Tools	JIRA, Confluence, ServiceNow, Slack, Microsoft Teams
Monitoring Tools	Prometheus, Grafana, CloudWatch, Loki, Splunk, Datadog, Dynatrace, Alerting, Performance Monitoring
Incident & Reliability Engineering	Incident Management, Root Cause Analysis (RCA), Problem Management, SLA/SLO monitoring
API Gateway & Security	Kong API Gateway, AWS API Gateway, API authentication & authorization OAuth 2.0, JWT, OIDC, Rate Limiting, JSON, YAML, SFTP, mTLS, API Security Best Practices.
Cloud Security & Governance	AWS IAM, Service Control Policies (SCP), GuardDuty, CloudTrail, AWS Config, Secrets Manager, Landing Zone Architecture, Least Privilege Access, Cloud Security Best Practices.

Education

June 2018

Bachelor of Engineering (BE) | VTU University | ATME College of Engineering - Mysuru

Certificates

- AWS Certified Solutions Architect – Associate
- Certified Kubernetes Administrator (CKA)
